SOURCE

Thirteen twin-engine aircraft with double rudder assembly, presumably Pe-2s, covered with tarpaulins, were parked in front of the eastern hangars of the SCHOENWALDE (N 53° / Z 66) airfield. Thirty of the previously observed single-engine low-wing monoplanes with in-line engine, landing gear retracting rearward, high cockpit and weapon firing to the rear, were parked south of the hangars.

25X1A

**Comment:**

The information that the airfield was reoccupied by twin-engine aircraft is received for the first time. According to recent reports, a ground attack regiment previously stationed in COTTBUS was assumed to be located in SCHOENWALDE. The twin-engine aircraft stationed in SCHOENWALDE prior to the arrival of the ground attack regiment were transferred to STAAKEN. The description of the single-engine aircraft confirms the presence of the ground attack regiment. Further information is required to ascertain whether the twin-engine aircraft were temporarily stationed at the field or whether a bomber unit, in addition to the ground attack regiment, is located there.

This document is hereby regraded to CONFIDENTIAL in accordance with the letter of 16 October 1978 from the Director of Central Intelligence to the Archivist of the United States.
